SUMMARY

Blockchain and full-stack engineer with a builder-first mindset, focused on shipping production systems end-to-end. I architect smart contract stacks, data pipelines, and operational tooling that survive real traffic and real users. I move projects from concept to deployment with clear technical ownership across product, backend, and on-chain infrastructure.

EXPERIENCE

Blockchain & Full-Stack Developer, Web3bridge Africa

Jan 2026 – Present

Remote

- Architected and deployed client-facing smart contract systems with upgrade-safe patterns and deterministic test coverage.
- Reduced release risk by introducing Foundry-based simulation suites and pre-deployment gas regression checks.
- Integrated web dashboards with on-chain event pipelines to provide near real-time protocol observability.
- Delivered full product stacks from technical discovery through deployment, handoff, and post-launch support.

Full-Stack Engineer, Freelance

Jun 2024 – Present

Hybrid

- Built multi-tenant backend services for analytics-heavy products using Django, PostgreSQL, and Redis.
- Deployed containerized workloads and CI pipelines that shortened iteration cycles for cross-functional teams.
- Integrated authentication, billing, and operational telemetry for production SaaS delivery.

PROJECTS

SOUL: Soul is a devnet-ready reputation protocol that turns identity registrations, soulbound credentials, and data points emitted by the RGP Solana program into an indexed reputation

package (built with TypeScript, PostgreSQL, NestJS, web3.js) · github.com/therealjhay/soul · [SOUL](#)

Blue Scribe: AI-powered audio-to-text transcription service with file upload and browser recording. Supports MP3, WAV, M4A, AAC, OGG up to 50MB with real-time processing. (Next.js, React, Gemini AI, Vercel) · github.com/therealjhay/blue-scribe · blue-scribe.vercel.app

Ares Protocol: ARES is a modular treasury management protocol designed to manage high-value assets for autonomous organizations. (Solidity, Foundry, Merkle Trees, OpenZeppelin) · github.com/therealjhay/ARES-TREASURY · substack.com/@therealjhay/note/p-190595895?r=6p9kb&utm_source=notes-share-action&utm_medium=web

SKILLS

Languages: TypeScript, Python, Solidity, Rust

Frameworks: Next.js, FastAPI, Django

Blockchain: Foundry, ethers.js, Viem

Tools: PostgreSQL, Redis, Docker, GitHub Actions

EDUCATION

National Open University, B.Sc. Computer Science

Present

CERTIFICATIONS

Solidity Developer Bootcamp, Web3bridge Africa

2026
